

## Bar Charts in Tableau

Use data file student\_enrollment.csv

You need to create 6 bar charts and apply some styling:

1. A vertical bar chart that shows the number of male students enrolled in each major.
2. A horizontal bar chart that shows the number of female students enrolled in each major.
3. A vertical grouped bar chart that shows the male vs female students in each major.
4. A horizontal grouped bar chart that shows a comparison of major enrollments across males and females.
5. A vertical stacked bar chart - <https://kb.tableau.com/articles/howto/stacked-bar-chart-multiple-measures>

Note: The “how to” article shows 2 ways of creating a stacked bar chart. Explore both. How are the results different?

6. Add titles and update the axes labels
7. Clean up ticks (if needed)
8. Update the colors of all the bar charts
